Reliability

How does DBR take care about the reliability of the Marine Generator sets, Pumps and other marine equipment?

Support

During the project DBR supports you in:

- Electrical & Mechanical Engineering
- Drawings
- Installation and instructions
- Classification
- Documentation

Testing and classification

DBR packages the generator sets according to the specific quality and safety regulations for Shipping Industry like BV, LRS, DNV or GL and latest valid emission regulation (EIAPP). The DBR Marine Generator sets are tested before installation according to these classification rules.

Commissioning

Testing on board by DBR Commissioning Engineers provides reliability and sustainability on board of your vessel.

Training

DBR can support you in the operation of Marine Generator sets and Pumps sets by training programs. Training of service employees takes place in-house, on board or at manufacturer.

Global Service

DBR works with qualified global partners to guarantee customers worldwide service and maintenance. DBR has its own maintenance and 24/7 service.

Maintenance

In many cases regular maintenance prevents failures in installations. DBR can perform maintenance work in its own facilities and on board.

Spare parts

- Insurance parts
- Advising part for required running hours
- Regular maintenance spare parts
- Service contract
