MARINE & OFFSHORE

Custom Built Marine & Offshore Cranes

# The range of Heila marine cranes

## Fully foldable telescopic

The **fully foldable telescopic cranes** are designed to keep the constant the torque moment, reducing the 'pendulum effect' of the load.

**Our cranes are suitable for a wide range of applications**, designed for deck operations, shipboard or light offshore needs to suit tugs, work boats, supply vessels, naval and coastal guard vessels and offshore rigs.

## Stiff boom

Designed for general cargo handling and service onboard ships and offshore units.

**Stiff boom cranes** are most suitable when the amount of space on deck is ample.

These cranes offer a cost-effective alternative to knuckle booms or telescopic booms.

These cranes should always be operated with a hoisting winch installation.

**Two different models are available**, namely for the small capacity cranes with slewing cylinders and for the bigger capacity cranes with slewing rings.

## Telescopic boom

**Telescopic boom cranes** can be hydraulic extended and retracted without a knuckle function.

These cranes should always be executed with a hoisting winch installation.

**Two different models are available**, namely for the small capacity cranes with slewing cylinders and for the bigger capacity cranes with slewing rings.

## Offshore cranes & AHC

**Offshore cranes** are tailor made designed according to the customer requirements, in order to prevent all the risks that an offshore handling equipment could meet.

All those custom-made products have the scope of being supplied for offshore applications which could relate to safeguard, oil & gas application, etc.

Most of those cranes are supplied with main authorities certificates upon request.

Heila group has invested great efforts to increase performance and safety of the equipment, reliability and efficiency of its cranes in extreme conditions.

## Jib

**Jib knuckle boom cranes** can be found on vessels with a big deck area and are also used on fixed platforms.

**Those cranes are more cost competitive** compared to jib knuckle boom cranes with hydraulic extensions.

Another advantage is that these cranes require less maintenance due to the fact that there are fewer joints.

## Telescopic knuckle boom

The **telescopic knuckle boom cranes** are specifically designed for general cargo handling and service onboard ships and also for offshore units.

**Tailor made to requested specifications**, in different boom lengths and lifting capacities for different sea state working conditions.

The parameters concerning the design are established in combination with the input of our customers.

#### Vessel Identification

Name:	SKANDI VITORIA
IMO number:	9387231
Last known flag:	BRAZIL
Class society:	DET NORSKE VERITAS
Build year:	2010
Builder:	VARD NITEROI
Manager & owner:	NORSKAN OFFSHORE

#### Heila Cranes Identification
